Introduction: It is well known that in some, rare cases axial arthritis can be a part of arthritis urica clinical problem.

Materials and methods: We present a case of a patient referred to our department with back pain. Axial arthritis diagnosis, as a rare arthritis urica presentation, was established. Successful treatment with colchicine was administered. We have followed up the patient, inclusive MR scanning, until resolution of the inflammatory changes.

Results: Axial arthritis as a rare form of arthritis urica can be successfully treated with colchicine.

Discussion: We want to mention arthritis urica as a possible, but rare, cause of axial arthritis, thus it can be successfully treated.

Conclusion: We should remember arthritis urica diagnosis also in the “biological treatment era”
